

CONTENTS

	<u>Page</u>
Foreword	
Executive Summary	
Notices	
Acknowledgments	
I. Introduction	
Regional Nutrient Criteria	
National Criteria	
Chesapeake Bay Criteria	
II. Chesapeake Bay Nutrient and Sediment Enrichment Criteria	
III. Dissolved Oxygen Criteria	
Background	
Natural dissolved oxygen processes	
Chesapeake Bay oxygen dynamics	
Low dissolved oxygen: historical and recent past	
Approach to Deriving Dissolved Oxygen Criteria	
Chesapeake Bay science	
Chesapeake Bay dissolved oxygen restoration goal framework	
Regionalizing the EPA Virginian Province saltwater dissolved oxygen criteria	
Applying the EPA freshwater dissolved oxygen criteria	
Species listed as threatened or endangered	
Scientific literature findings	
Instantaneous minimum versus daily mean	
Strengths and limitations of the criteria derivation procedures	
Chesapeake Bay Dissolved Oxygen Criteria Derivation	
Migratory fish spawning and nursery designated use criteria	
Open-water fish and shellfish designated use criteria	
Deep-water seasonal fish and shellfish designated use criteria	
Deep-channel seasonal refuge designated use criteria	
Chesapeake Bay Dissolved Oxygen Criteria	
Literature Cited	

IV. Water Clarity Criteria

Background

Approach Deriving Water Clarity Criteria

The relationships of water quality, light and underwater bay grasses

Determining light requirements

Strengths and limitations of the criteria derivation procedures

Chesapeake Bay Water Clarity Criteria Derivation

Minimum light requirements

Light through water requirements

Light at the leaf requirements

Chesapeake Bay Water Clarity Criteria

Literature Cited

V. Chlorophyll *a* Criteria

Background

Approach to Deriving Chlorophyll *a* Criteria

Chlorophyll *a* concentrations characteristic of desired ecological conditions

Protecting against water quality impairments

Strengths and limitations of the criteria derivation procedures

Chesapeake Bay Chlorophyll *a* Criteria Derivation

Narrative chlorophyll *a* criteria

Chlorophyll *a* concentrations characteristic of desired ecological conditions

Chlorophyll *a* concentrations protective against water quality impairments

Chesapeake Bay Chlorophyll *a* Criteria

Narrative chlorophyll *a* criteria

Numerical chlorophyll *a* criteria

Methodologies for deriving waterbody-specific chlorophyll *a* criteria

Literature Cited

VI.	Recommended Implementation Procedures
	Determining Attainment
	Dissolved oxygen criteria
	Water clarity criteria
	Chlorophyll <i>a</i> criteria
	Defining Criteria Attainment
	Dissolved oxygen criteria
	Water clarity criteria
	Chlorophyll <i>a</i> criteria
	Addressing Magnitude, Duration, Frequency, Space and Time
	Developing the Cumulative Frequency
	Step 1. Interpolation of water quality monitoring data
	Step 2. Comparison of interpolated water quality data to the appropriate criterion value
	Step 3. Identifying interpolator cells that exceed the criterion value
	Step 4. Calculating the cumulative probability of each spatial extent of exceedence
	Step 5. Plot the spatial exceedence vs. the cumulative frequency
	Diagnosing the Magnitude of Criteria Exceedence
	Defining the Reference Curve
	Reference curves for dissolved oxygen criteria
	Reference curves for water clarity criteria
	Reference curves for chlorophyll <i>a</i> criteria
	Monitoring to Support the Assessment of Criteria Attainment
	Dissolved oxygen criteria assessment
	Water clarity criteria assessment
	Chlorophyll <i>a</i> criteria assessment
	Evaluation of Chesapeake Bay Water Quality Model Output
	Chesapeake Bay Watershed Model
	Chesapeake Bay Water Quality Model
	Integration of Monitoring and Modeling for Criteria Assessment
	Literature Cited

VII. Recommended Criteria Attainment Diagnostic Procedures

Addressing Natural Exceedence of the Chesapeake Bay Criteria

Natural excursions of low dissolved oxygen conditions

Natural reductions in water clarity levels

Natural elevated chlorophyll *a* concentrations

Diagnosing Causes of Criteria Non-Attainment

Dissolved oxygen criteria

Water clarity criteria

Chlorophyll *a* criteria

Literature Cited

Glossary

Acronyms

Appendices

- A. Refined Designated Uses for Chesapeake Bay and Tidal Tributary Waters
- B. Sensitivity to Low Dissolved Oxygen Concentrations for Northern and Southern Atlantic Coast Populations of Selected Test Species.
- C. Summary of Literature on the Tolerance of Chesapeake Bay Macrobenthic Species to Low Dissolved Oxygen Conditions
- D. Narrative, Numerical and Method-based Chlorophyll *a* Criteria Adopted as Water Quality Standards by States Across the U.S.
- E. 1950s-1990s Chesapeake Bay and Tidal Tributary Chlorophyll *a* Concentrations by Chesapeake Bay Program Segment
- F. Phytoplankton Reference Community Data Analyses Supporting Chlorophyll *a* Criteria Derivation
- G. Data Supporting the Determination of Impairment Thresholds for Potentially Harmful Algal Bloom Species
- H. Derivation of Cumulative Frequency Distribution Criteria Reference Curves
- I. Analytical Approaches for Assessing Short-Duration Dissolved Oxygen Criteria
